

Immunology

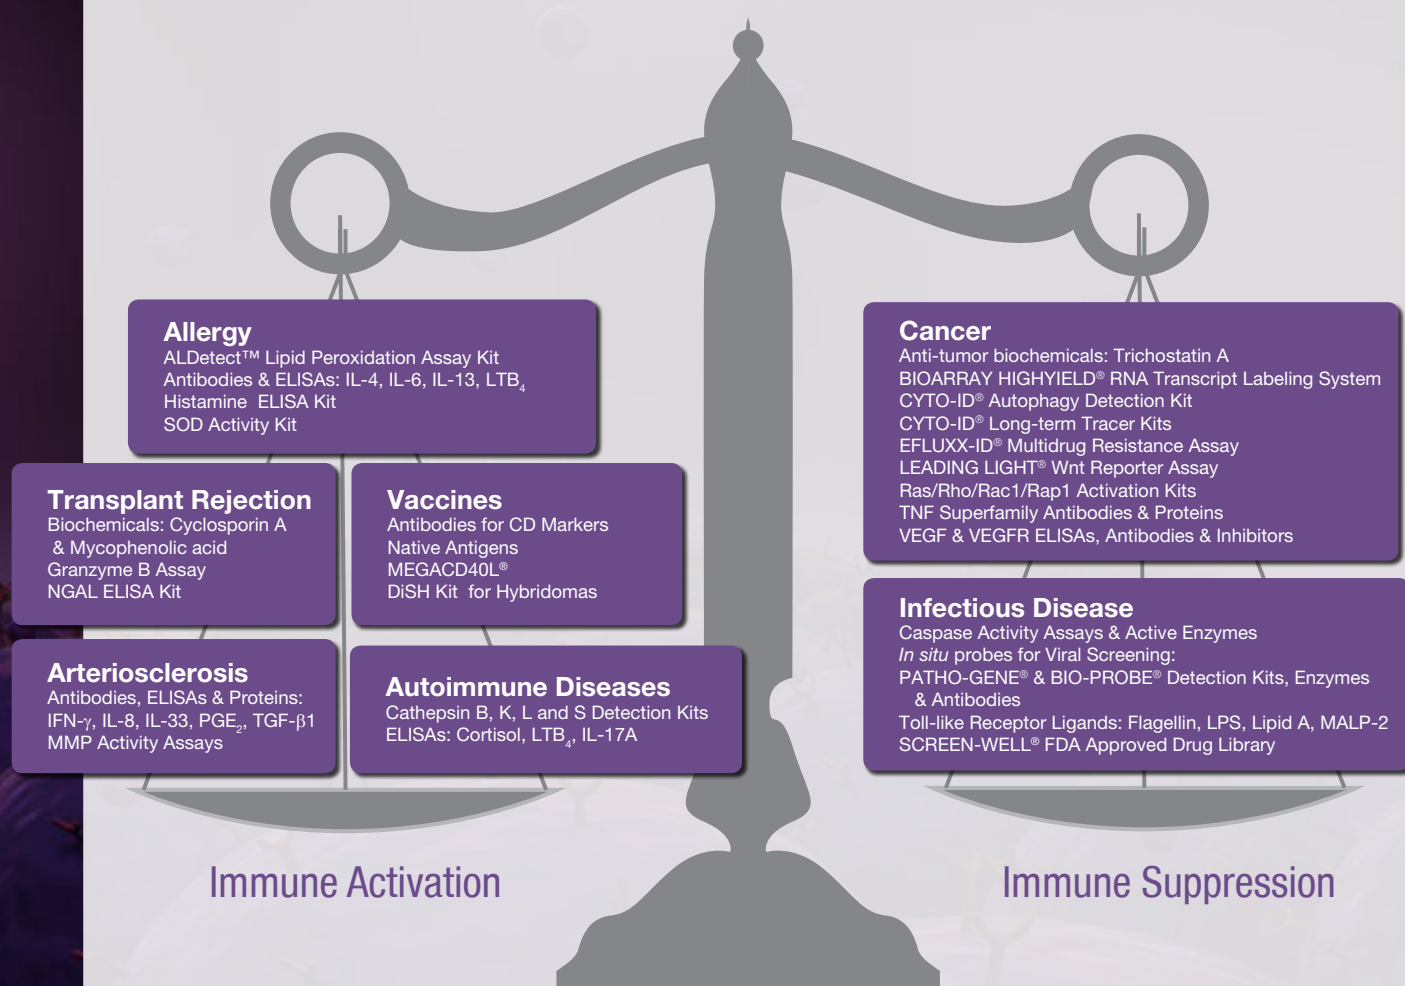

Innovative Products to Analyze
Immunological Disorders

TIP THE BALANCE IN YOUR FAVOR

Comprehensive Tools for Interpreting Immunological Responses

Maintaining the proper balance between immune activation and suppression is critical for physiological functioning of the innate and adaptive immune system. Disruption of this equilibrium leads to immunological disorders including autoimmune diseases, hypersensitivities, and immune deficiency. Enzo Life Sciences provides a comprehensive portfolio of products to detect and modulate the complex processes of immunological disease.

Cell Analysis & Detection

Enzo's expertise in fluorescent probe chemistry and cellular analysis combine to provide high-quality, flexible detection platforms for immune cell profiling and functional analysis. Our unique fluorescent probe-based assays and widely cited antibodies enable multiplex detection of cellular markers and key parameters of cell viability, cell signaling, death pathways, and toxicity.

Immunoassays & Antibodies

As a trusted manufacturer of thousands of widely cited and thoroughly validated ELISA kits and antibodies, we understand quality means delivering sensitivity, specificity, and consistency. With over 300 immunoassay and detection kits, 3000 antibodies, and a complete set of IHC reagents, Enzo enables sensitive & specific analysis of biomarkers for immune dysfunction to determine the source and consequence of the immunological response.

Small Molecule Chemistry

More than 3000 biologically characterized small molecules and the industry's most diverse collection of compound libraries for predictive toxicology. Our catalog includes hundreds of REDOX compounds, natural products, and bioactive lipids available as ready-to-screen SCREEN-WELL® libraries or as individual and bulk compounds. Learn more about our SCREEN-WELL® Hematopoietic Toxicity Library which includes compounds with defined and diverse hematotoxicity.

ARM YOURSELF WITH HIGH PURITY LIGANDS & ANTIBODIES FOR INFECTIOUS DISEASE RESEARCH

Toll-like Receptors

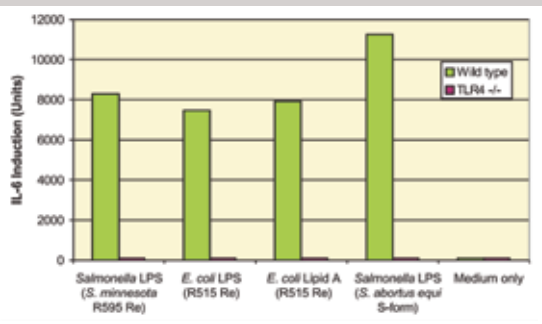

Providing the purest ligands for recognition by pattern recognition receptors

WORRY-FREE ANTIBODIES

Enzo offers over 50 TLR antibodies validated for flow cytometry and microscopy applications.

TLRgrade™ LPS & Lipid A Reagents <ul style="list-style-type: none"> • Ultrapure (≥99.9%) • Sterile, ready-to-use liquid formulation • No hazardous handling 	Key Toll-like Receptor Ligands		
	TLR	Ligands	Product #
	TLR 1/2	Pam ₃ Cys-Ser-(Lys) ₄ trihydrochloride	ALX-165-066
	TLR 2 & TLR 6/2	MALP-2	ALX-162-027
	TLR 3	Polyinosinic-polycytidylic acid. potassium salt (TLRGRADE™) (synthetic)	ALX-746-021
	TLR 4	Paclitaxel	BML-T104
	TLR 5	Flagellin (high purity)	ALX-522-058
	TLR 7/8	R-848	ALX-420-038
	TLR 9	ODN 2006 (TLRGRADE™) (synthetic)	ALX-746-006
		ODN 1826 (TLRGRADE™) (synthetic)	ALX-746-002
TLR 11	Profilin (<i>Toxoplasma gondii</i>), (recombinant) (GST-tag)	ALX-522-093	

High Purity LPS & Lipid A Preparations Do Not Activate TLR2 or other TLRs

Activation of macrophages from TLR4 wild type compared to TLR4 deficient mice by TLR GRADE™ LPS and TLR GRADE™ Lipid A from Enzo Life Sciences. Lipid A or LPS concentrations, which induced maximal activation of TLR4 wild type mouse macrophages, were also applied to TLR4 deficient mouse macrophages (105) as follows: 80ng Salmonella LPS (S. minnesota R595 Re), 80ng E. coli LPS (R515 Re), 400ng E. coli Lipid A (R515 Re) and 400ng Salmonella LPS (S. abortus equi S-form). 10 units of IL-6 correspond to the detection limit of the IL-6 ELISA.

Monitor Activity of Therapeutic Compounds

High-throughput screening for multidrug resistance

EFLUXX-ID® Green Multidrug Resistance Assay Kit (ENZ-51029)

EFLUXX-ID® Gold Multidrug Resistance Assay Kit (ENZ-51030)

- Quantitative measurements of multidrug resistance activity in live cells
- Simple and reproducible mix-and-read protocol optimized for flow cytometry
- Two dye formats allows multiplexing with GFP-expressing cell lines or other CELLestial dyes

The Only Assay for Functional Detection of All Three Clinically Relevant ABC Transporter Proteins

Profiling of ABC transporter activity by known inhibitors was assessed in CHO K1 cells using EFLUXX-ID® Green and EFLUXX-ID® Gold dyes.

Native Bacterial and Viral Antigens

Optimized Expression Systems Deliver Superior Antigenicity

We offer a broad range of native state bacterial and viral antigens for vaccine research and *in vitro* diagnostics markets. Purified native protein or production in the latest mammalian expression systems ensure that the resultant antigens are expressed to a high level, are in their native folded state, and possess all relevant post-translational modifications.

- Higher specificity and sensitivity
- Minimal lot-to-lot variation
- Reproducible scale-up for bulk quantities
- Lyophilized format for extended shelf-life

Highly Virulent Bacterial Toxins

<i>B. pertussis</i>	<i>M. pneumoniae</i>
<i>C. difficile</i>	<i>N. gonorrhoeae</i>
<i>C. diphtheriae</i>	<i>T. vaginalis</i>
<i>C. trachomatis</i>	<i>V. cholerae</i>

Factors for Modulating the Host Response

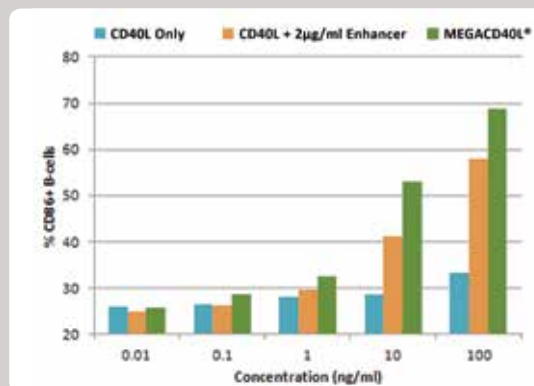

Superior Performance from Carefully Engineered TNF Superfamily Ligands

MEGACD40L[®] (soluble) (human), (recombinant) (ALX-522-110)

- Improved stability and enhanced activity, when compared to CD40L alone or with enhancers
- Superior purity eliminates experimental artifacts
- 100-fold lower endotoxin levels than comparable products
- Guarantees reliable results through consistent lot-to-lot performance

Related Products

MEGACD40L [®] (soluble) (mouse), (recombinant)	ALX-522-120

Enhance Immune Activation with MEGACD40L[®]

B cell lymphocyte activation by various CD40L constructs. PBMCs were treated for 48 hrs in media containing serially diluted CD40L, CD40L + 2µg/mL Enhancer, or MEGACD40L[®]. Cells were dual-stained with α -human CD19-PE and α -human CD86-APC and analyzed by flow cytometry. Data are presented as the percent of CD19+ B cells that co-stain as CD86+.

Detect and Identify Viral Infection

PATHO-GENE[®] HPV Probes

HPV probes and typing assays for sensitive detection of pathogen-expressed genes from fresh or FFPE tissue sections.

BIO-PROBE[®] Probes

Biotinylated probes for specific detection of:

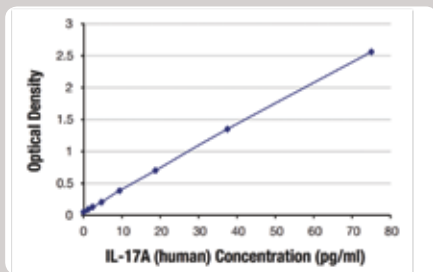

Adenovirus	Hepatitis A Virus
BK Virus	JC Virus
Cytomegalovirus	SV 40
Herpes Simplex	

QUANTIFY BIOMARKERS OF INFLAMMATION WITH HIGH-SENSITIVITY ELISAS

Detect Mediators of Acute And Chronic Inflammation with Enzo's Portfolio of Over 100 Sensitive ELISAs for Cytokines and Eicosanoids

IL-17A (human), ELISA Kit (ADI-900-177)

- Ultra-Sensitive assay detects as little as 0.201 pg/ml in cell supernatants, serum and plasma
- Highly specific with negligible reactivity to other family members
- Rapid results in just 3 hours

Dose response curve of recombinant human IL-17A standard.

Histamine ELISA Kit (ENZ-KIT140)

- Highly sensitive measurement, detecting as little as 0.03 ng/ml
- Unique assay which does not require an additional acylation step
- Rapid results in 2 hours

CRP (human) ELISA Kit (ENZ-KIT102)

- Sensitive measurement of CRP, detecting as little as 12.685 ng/ml
- Highly specific with negligible reactivity to other family members
- High-throughput format with results in <2 hours for up to 40 samples in duplicate

Detect Specific Cell Populations with Antibodies for CD Markers

Enzo Life Sciences offers a broad range of antibodies for use in all areas of immunology. Many are validated for use in key applications such as flow cytometry, immunohistochemistry, immunoprecipitation and Western blotting. Every antibody is backed by our Worry-free Antibody Trial Program, allowing you to evaluate any of our antibodies of interest for your specific application or species without risk.
